Result # 51 Relevance: 

Promoting File Versions Through Rename

1990-11-01 IPCOM000102499D

English (United States)

Optical WORM (write once read many) media provides multiple versions of data files by the fact that old data cannot be erased. If a new version of a file is created that contains erroneous information, getting access to a previous version of the file will undo the error. A ...

Result # 52 Relevance: 

Apparatus for Transparent Redirection of Device Output upon Detection of Critical File Input/Output

1993-06-01 IPCOM000105097D

English (United States)

A program is described which relates to output device redirection, particularly to automatic device output redirection when the device cannot be successfully written to with a registered critical file.

Result # 53 Relevance: 

Layered Removable Media Directory Definition

1990-12-01 IPCOM000102570D

English (United States)

Described is a directory system designed for use with large removable media. The assumption is that interchange between systems and applications will be common. To facilitate this, the directory structure is layered, and each layer imposes only the structure required by ...

Result # 54 Relevance: 

Establishing Distributed File System Access to MVS Host Files

1995-04-01 IPCOM000115230D

English (United States)

Disclosed is a method for providing access to MVS host datasets through OSF's DCE/Distributed File System (DFS) with data integrity and consistency and without change to either MVS or to DCE applications. The method consists of two parts, one for accessing MVS datasets and ...

Result # 55 Relevance: 

File Synchronization Integrity

1991-09-01 IPCOM000121533D

English (United States)

Disclosed is a process which insures the detectability of incomplete operations on a set of interdependent files.

Result # 56 Relevance: 

Implicit Mapping of File Data

1995-04-01 IPCOM000115385D

English (United States)

Disclosed is a method for providing the benefits of mapping files without requiring changes to existing applications. An application continues to use the standard file system Open, Read, Write, and Close commands. This method of implicit mapping allows an application to ...

Result # 57 Relevance: 

Method to Create Sylk-Type File

1986-03-01 IPCOM000060207D

English (United States)

The SYLK file format is such that fields which appear contiguous on a spreadsheet may not be stored contiguously in the SYLK file. Therefore, fields are placed in the data file as they are reached in the SYLK file and the contents of the new fixed-length record is not known ...

Displaying records #141 through 150 out of 500
(search stopped at 500 hits)

Result # 141 Relevance: 

File Deletion in an Os/2 Environment With Multiple Processes Opening the Same File

1989-04-01 IPCOM000034840D English (United States)

Disclosed is a process for handling file deletions when multiple processes may open the same file. This procedure causes the file to be deleted even after a power off/power on condition. In one embodiment, a Buffer Pool Services (BPS) routine keeps track of the number of ...

Result # 142 Relevance: 

Method to Insure That a Directory Is Always Opened in Full Synchroniza Tion Mode

1988-05-01 IPCOM000057531D English (United States)

AIX* directories are files that are used by the system to convert file names to i-numbers, which are needed to locate a file's data. Because directories are files, programs can open and read their contents like any other file. In a distributed environment, opening a remote ...

Result # 143 Relevance: 

Send Files from LAN to Wide Area Network

1993-08-01 IPCOM000105610D English (United States)

Disclosed is a method which allows Local Area Network (LAN) users to send files through a System/370* (S/370) host Wide Area Network (WAN).

Result # 144 Relevance: 

Media Directory With System Useability Features

1990-03-01 IPCOM000100113D English (United States)

A media logical format and directory structure have an ability to: - dynamically add additional file attributes, - initial program load (IPL) multiple systems from one media, and have multiple code loads for a single system, - associate "other data" with a data ...

Result # 145 Relevance: 

Parameter File Parser and Builder

1995-08-01 IPCOM000116126D English (United States)

A parameter file parse and build routine which parses parameter configuration file information for an earlier release of a product and rebuilds the paramater files with updates and new parameter information for a new product release is disclosed.

Result # 146 Relevance: 

Algorithm for the Assured Placement of Files into Syncpoint Enabled System

1998-12-01 IPCOM000123469D English (United States)

Problem The file systems that most operating systems use do not have any concept of "unit of work" or syncpoint control. Whenever it is necessary to move a set of files into a system that does support "unit of work" or syncpoint control, for example a ...

Result # 147 Relevance: 

Use of File Creation Log Sequence Number during Database System Restart

1992-10-01 IPCOM000110016D English (United States)

As described in "ARIES: A Transaction Recovery Method Supporting Fine-Granularity Locking and Partial Rollbacks Using Write-Ahead Logging" by Mohan, et. al., OS/2* Database Manager uses a two-pass database restart method (redo, undo), skipping an analysis pass. ...
